

My Invention

My invention is called:

Musical Collars

What problem does my machine solve?

Have you ever lost your small pet hamster, kitten, chinchilla, lizard or any other small animal in your home? This collar helps you find your furry friend wherever they are in your house.

Supplies I will need

- A collar
- Small music device
- Remote control

My invention design:

The collar comes with a remote control. If your small pet is lost in the house, press the button on the remote control for playing music. You will hear the music and find your pet!
