

Oral Text Summary

Use the main idea and important supporting to details to create your summary of the text.

Title: What is a star?

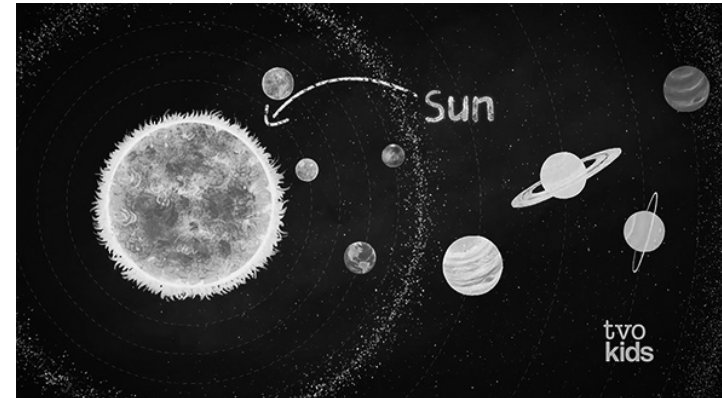

Main Idea: This oral text shares the features of a star and provides examples of the different types of stars in the universe.

Important Detail #1:

Stars are big balls of gas in space. They may seem small, but that is because they are very far away from Earth.

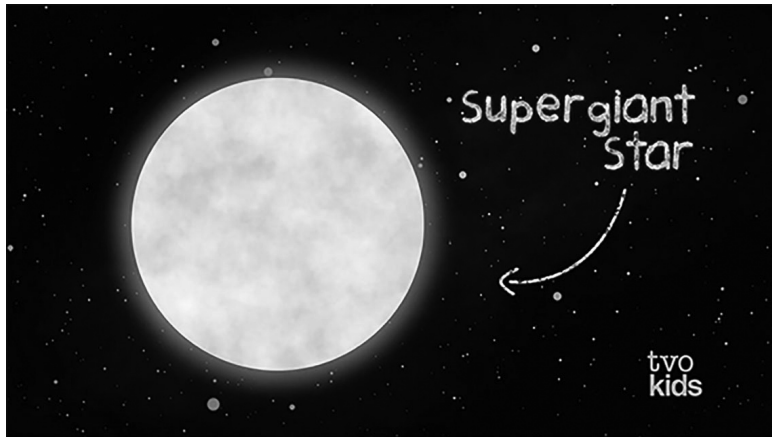

Important Detail #2:

The sun appears big because it is the closest star to Earth. The sun is a yellow dwarf star.

Important Detail #3:

The largest and hottest stars in the universe are called supergiants. You can find a supergiant in the constellation Orion.

Important Detail #4:

There are 10 times more stars in the night sky than grains of sand in all of the deserts and beaches on Earth.
