

Creating Fractions

Create a fraction to represent the following scenarios:

- 1.) There is a box of smarties with five smarties, three gummies, and four gumdrops. What is the probability that a gummie will get picked?

Creating Fractions

2.) You have a regular deck of 52 cards. There are 13 cards in each suit (13 hearts, 13 diamonds, 13 spades, and 13 clubs). There are ace, two to 10, jack, queen, and king in each suit. You will shuffle the deck and randomly pull a card. Use fractions to describe how probable each event is.
