

Travelling and Costs

During the Canadian winter months, some families have the privilege of visiting the warmer countries down south. Two travellers are going to Mexico for the winter break. They save \$3,500.00 for the trip. Hotel and flight cost them 48,000.00 Mexican pesos.

- If one Mexican peso costs \$0.065 Canadian, do they have enough money to cover the trip?
- Will they have money left over for other spending on their trip? How much?
- Explain and show your work, including number statements and operations used.
