

Species Disappearing Over Time

In 2015, The Yale School of the Environment examined data for the (estimated) rate of species extinction on Earth. At that time the rate was 8,700 species disappear in a year. This rate is expressed in the following document to help you find equivalent rates given the years provided.

Use the following fillable and printable document "Species disappearing over time" to find out how many species disappear in 2 years, 3 years, 4 years, 5 years. You can also complete this activity in your notebook.

Number of Species Disappearing	Time (Years)
8,700	1
	2
	3
	4
	5
