

Altitudes Travelled by a Submarine

Given this set of data in regards to various altitudes travelled by a submarine at different times of the day, consider which number line would be most useful and compare the similarities and differences between each. Is it easy to interpret the information? What are the pros and cons of each number line?

Time	Altitude
9:30 am	2 m above sea level
10 am	0
11 am	135 m below sea level
12 pm	210 m below sea level
1 pm	310 m below sea level
2 pm	150 m below sea level
