

## Comparing Data in Sports

### Task: Real world problem 2

You may or may not realize, but there is a lot of data collected in sports. Choose a sport and collect some information that you are interested in analyzing. It could be anything from misses and buckets of basketball players on a team to the wins and losses of a soccer team compared to the rest of the league.

Use fractions or decimals based on the researched data and order them. You should use a minimum of ten numbers.
