

Smallest to Greatest

Using the information in the learning activity, fill in each pan balance from smallest to greatest mass.

Tip: Your first pan balance will have the lightest item on the left-hand side and the next heaviest item on the right-hand side. It would compare the mass of the lightest and the second lightest items.

The second pan balance would have the second lightest and the next item in the list.

Your last pan balance will have the heaviest item on the right-hand side.

You can write in the names of the objects or draw a picture for each pan.
