

Designing a Structure

Answer the following questions to help you design your structure.

1) Describe your structure. What will it be used for?

2) What materials will you consider using in your design? Why?

3) What type of workers will you need to help build your structure?

4) Where will your structure go? Will this affect any plant or animal habitat?

5) How will you know if your structure is strong and stable? How will you test it?

6) Is there anything else you need to consider before you begin building?
