

Food Web

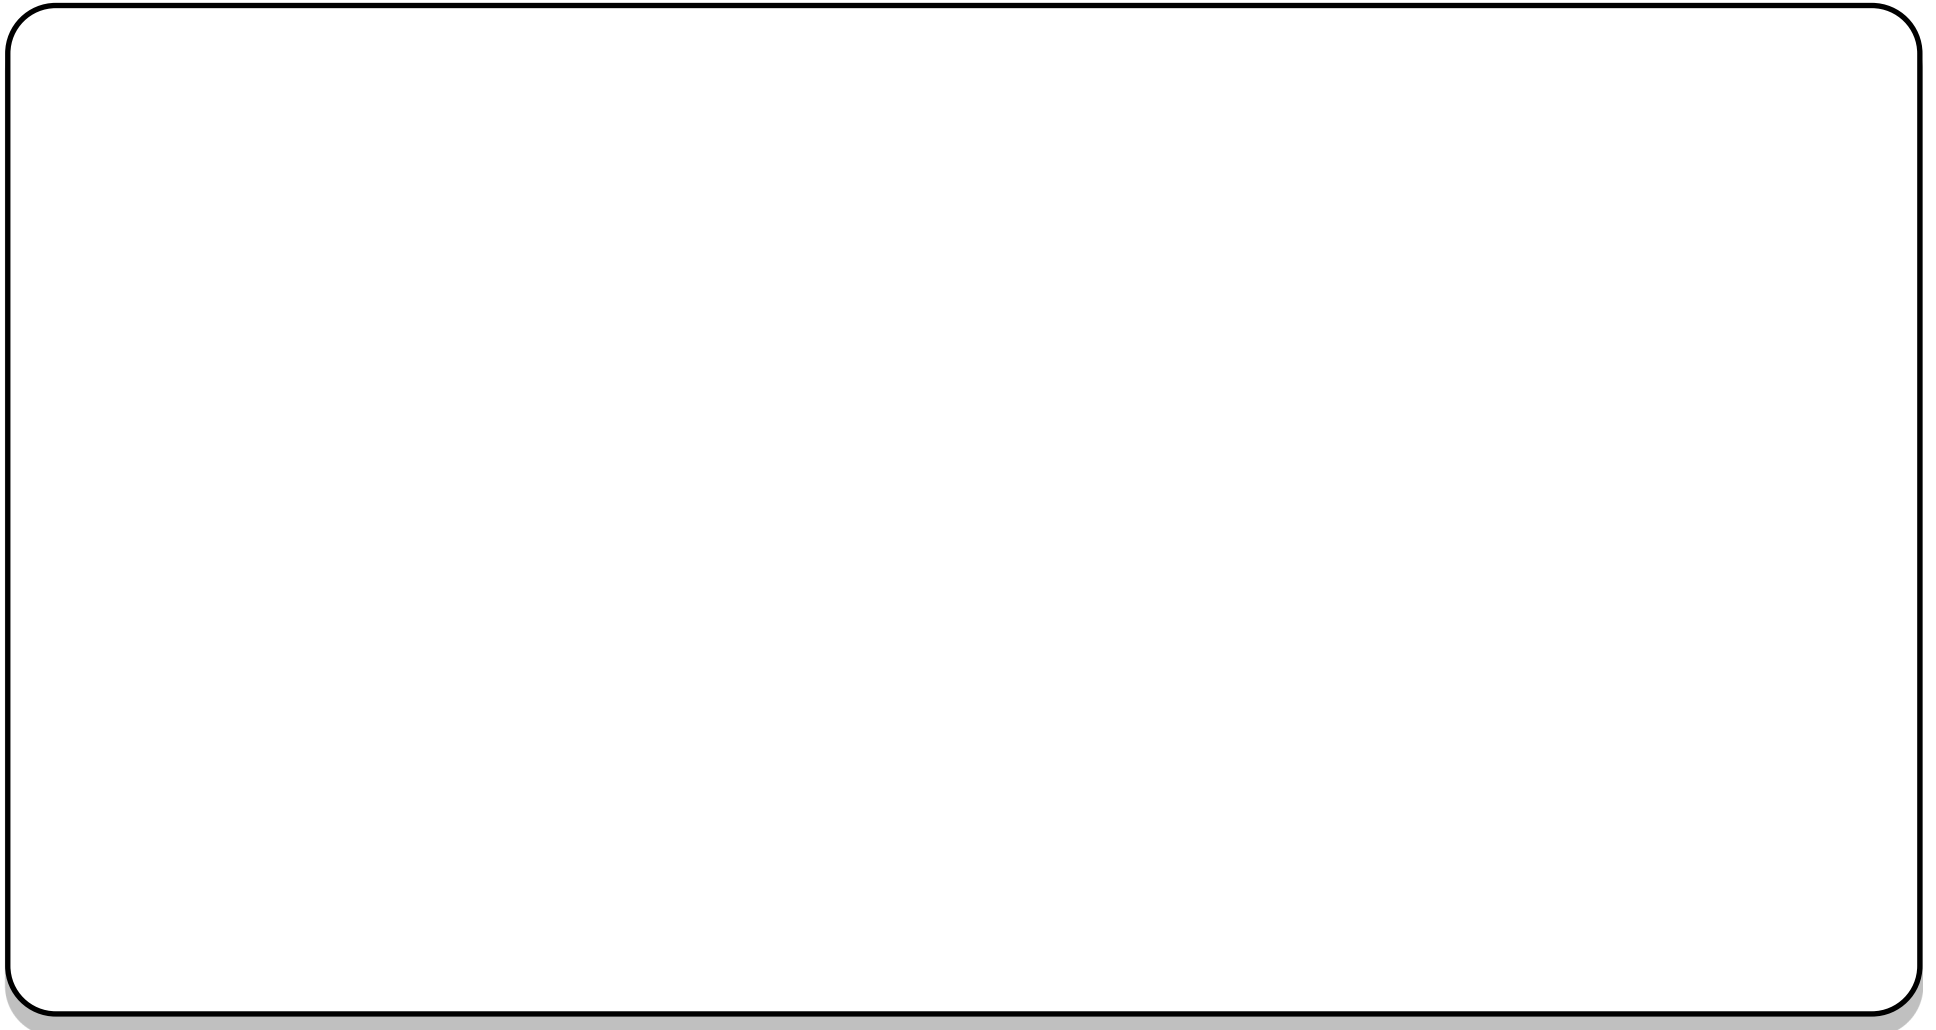

Create a food web using local organisms from a nearby neighborhood, or other organisms that live in Ontario.

Write the name of the organism, or draw a picture of it, and label it as a producer, consumer, or decomposer. You can also use the pictures of organisms on the following page as inspiration, or print and cut them out, then glue them in place in your food web.

Connect the organisms. The plants who receive energy from the sun are the producers and should go first. Then the consumers who eat the plants go next and the consumers who eat other consumers. Don't forget the decomposers! Remember to draw arrows in the direction of the flow of energy.
